Hino Motors Manufacturing Celebrates 10 Years of Medium Duty Truck Production

Hino Motors Manufacturing facility in Williamstown, West Virginia celebrated 10 years of Medium Duty truck production. This 245,000 sq. ft. location produces Hino's award winning Class 6 & 7 Conventional body style trucks. The West Virginia plant has seen exponential growth over its decade of production, facilitating the country's fastest growing Medium Duty Truck. "I want to thank all of the Team Members at the West Virginia facility. They are the heart and soul of our company. Without their commitment to quality, Hino Trucks would not be the premium brand name it is today. I would also like to thank the State of West Virginia, Wood County and the city of Williamstown for their tremendous partnership over the past 10 years." said Yoshinori Noguchi, Chairman of Hino Motors Manufacturing and President & CEO of Hino Motor Sales.

This anniversary is a substantial milestone when considering the growth that Hino has experienced since 2007. Production per year has increased by more than 500% and the production facility has been expanded and capacities enhanced.

Takeuchi-US Adds Ditch Witch of Georgia to its Dealer Network

Takeuchi-US, an innovative global leader in compact equipment, has added Ditch Witch of Georgia to its dealer network. The company serves the trenching, grading, city and county governments, utility, directional drilling, locate electronics, water/sewer and landscaping markets, among others throughout Georgia.

Established over 55 years ago, the full-service dealer in Albany, Georgia now offers the full lineup of Takeuchi equipment — excavators, skid steer loaders, track loaders and wheel loaders.

"There is a reason Ditch Witch of Georgia has been around for over a half-century backed by strong customer service and continually expanding its portfolio," said Kim Robinson, director of sales at Takeuchi-US.

"There is a great demand for compact equipment in our area and Takeuchi machines will fill that need," said Ricky McCrary, branch manager, Ditch Witch of Georgia - Albany. "Not only does Takeuchi offer well-performing machines, but they are also a local manufacturer and just a few hours up the road from us. The brand carries a strong reputation around here and we are excited to showcase their products."

Access Construction Equipment Inc.

Access Construction Equipment is the manufacturer of the unique Miniconveyor, MiniveyorUSA and Handiveyor portable conveyors. The Access family of portable conveyor systems are constructed of aircraft grade anodized aluminum sides, stainless steel slider beds on top and bottom, high frequency microwaved PVC belting, hermetically sealed motors and a high density foam core. The combination of strength and versatility makes this conveyor system unique in the market.

Our lightweight conveyors come in 5', 10', 15' and 20' sections to fit the needs of all your jobs. Our 15" wide version handles 25-30 tons per hour and the 20" version handles 45-50 tons per hour. We manufacture the conveyors with your choice of 120 Volt, 220/240 Volt or 480 Volt 3 Phase motors.

Miniconveyor and MiniveyorUSA are the ideal choice for moving loose materials, debris, rock, dirt, cement and more. Both have been used extensively for below grade excavating, mining, tunneling, construction, demolition, disaster restoration, landscaping, pool installation, and all tight access jobs. With accessories including different size hoppers, variable height stands, side rails to prevent spillage, clamp kits to mechanically lock conveyors together and cantilevers, we can put together a conveyor system to perfectly fit your application needs. Whether you are inclining up a steep bank or into a dump truck, moving material across level ground, down a slope, or below grade excavating, the Miniconveyor and MiniveyorUSA systems offer the unique solution for difficult jobs.

Handiveyor is the same rugged yet lightweight conveyor configured with the belt being the highest point. This conveyor option is ideal for moving packages or solid materials of all sizes.

Access also manufactures the Portable Miniscreener screening system. Weighing 420 lbs and manufactured with handles and wheels allows for easy mobility. Miniscreener is available in 120V and 220V single phase and in 480V three phase power.

Access Construction Equipment distributes a variety of other equipment. Our Tracked Dumpers and Haulers come with a variety of features to meet your specific needs including diesel or batter power. Our single and three phase Portable Generators can bring the power you need to any work site.

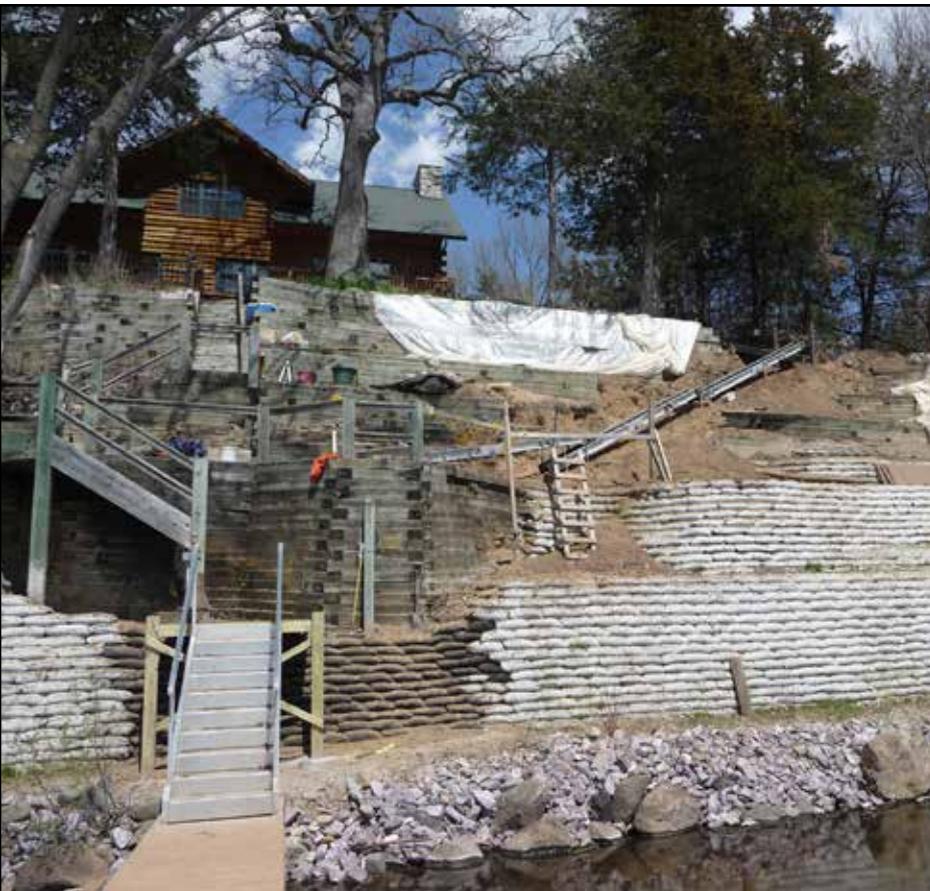

Finally, our line of Safety Platform Systems cannot be matched. It combines the flexibility and strength of traditional scaffolding with the simplicity and mobility of tower systems. Our safe, OSHA compliant systems can be configured over, around or under and existing structures or equipment. The quick to connect components use a unique no tools assembly system. Access can design a custom system to meet your needs.

Access Construction Equipment manufactures and carries lines of equipment unique to the market and prides itself on its excellent customer service. The staff looks forward to discussing how this equipment can offer a solution to your job applications.

Here is just a sampling of the wide variety of jobs Miniconveyor has made possible.

Sparta, GA

Morely Environmental needed to find a way to save the structure walls of the Hancock County Courthouse which was built in 1883 and is listed on the National Registry of Historic Places. The courthouse sustained an estimated \$5.5 million in fire damage and the debris needed to be carefully removed without jeopardizing the structure. To add to the challenge, the entry points to the building are 6'-8' above ground level. Miniconveyor units were brought in and workers were able to remove the burned rubble safely without leaving any damage as well as easily move it to a parking lot area where larger machinery could haul it away. In addition, once the cleanup was completed Miniconveyor was used to excavate below ground in order to create a basement to the building. Without the use of Miniconveyor, the only viable ways to remove the debris would have been with a bucket brigade or possibly wheelbarrows and ramps. Miniconveyor proved to be a great solution for Morely Environmental, not to mention helping to save an historic landmark.

Lake Wisconsin, WI

Dixon Shoreline contacted Access Construction Equipment with a unique project involving a lake front property requiring a new retaining wall on a severe slope to the lake. The new design involved removing the rotting wooden retaining wall and replacing it with new technology referred to as "reinforced vegetative bio engineering method". The old wooden boards with a life span of 10-15 years were to be replaced with "soil bags" which would be plugged with native vegetation, creating a beautiful, natural landscape while controlling erosion at the same time. The problem was just how to get this huge number of soil bags in place in a cost effective and safe manner on such steep terrain. Miniconveyor units were brought in and the workers were able to feed the soil bags to each section of the new retaining wall. Workers could easily take them from the conveyors and place them as needed. Miniconveyor again saved a tremendous amount of time and labor. Without Miniconveyor, workers would have needed to create a human chain to pass the soil up this steep incline.

Rowlett, TX

Expansive soil is a common cause of foundation problems in some areas. Foundation soils under a Texas school had risen so much that they began pushing gas and plumbing pipes up through the floor precipitating immediate repairs. The excavation would include removing 600,000 square feet of soil from 4 feet below grade. The project also came with a completion timeline, demanding that the work be completed during the school's summer break. The construction company which won the bid began the job using a plastic bucket and rope. By this method, the job required workers below filling the bucket by hand using shovels, workers above ground to pull the bucket out, lift and dump it and finally push it back into the space below the building. Workers had 2 buckets in operation. Three weeks into the job, the foreman was well aware that the project could not be completed in the time allowed using this labor intensive bucket method and had to come up with a new solution.

Access Construction Equipment provided 150ft of 480 Volt 3 phase MiniveyorUSA portable conveyors to the job site. Access staff trained the workers in set up and operation of the system. In the first 3-4 hours on the job, MiniveyorUSA moved about the same amount of dirt as had been moved over the previous 3 weeks utilizing the bucket method. The construction company and the workers were elated. The job was completed in time for school to begin in the fall. MiniveyorUSA provided the means to get the work done in a timely and cost effective manner.

#1 IN DURABILITY

Panama City, FL

Florida's coast is ever changing. Contractors need to think outside of the box when tides, winds and rain shift white powder sand around to the point that repairs must be made. That is where Access Construction Equipment's portable conveyor, MiniveyorUSA, came in for this private section of Florida beach. The erosion of the sand had left large low areas, allowing huge areas of stagnant water to stand all along the coastline. In addition to these stagnant pools being unsightly, they can also be dangerous. The condominium association along this stretch of beach sought to repair the beach in order to restore the usability, beauty and values of their property. Their contractor turned to Access Construction Equipment for a unique answer.

The contractor had many limitations in devising a plan to bring in 1500 tons of sand to the beachfront. The condo association rules would not allow for equipment to run back and forth onto the beach because of the destruction they cause. Beach access was an issue due to vegetation, fencing and the uneven soft sand. The only conventional options were wheelbarrows run on boards from the roadway to the shoreline or a bucket brigade of workers passing containers of sand over that long distance. Either option being slow, time consuming, strenuous and costly in labor. Access Construction Equipment had a much more efficient, cost effective solution.

Eleven MiniveyorUSA were brought in and set up, stretching over 150 feet from the parking area to the edge of the sand line. The conveyors were easily laid out between buildings, through existing gateways. The sand was brought in by dump truck and loaded onto the first conveyor using a 6' skid steer bucket. The conveyors carried the sand continuously across the terrain and onto the beach where it was deposited and moved into place by one small bobcat.

Estimated time for completion of this job using wheelbarrows or buckets was a minimum of 3 weeks. The entire job, using MiniveyorUSA, was completed in only 4 ½ days. This was much less disruptive for residents and vacationers alike. When the job was complete, in less than a week, the conveyors were picked up and taken away, leaving absolutely no footprint behind. Vegetation and wildlife were undisturbed and no fences needed repair since the conveyors fit right through the open gate. The condominium residents were thrilled with the end result and the means to get there using Access Construction Equipment's MiniveyorUSA. •

Brokk Introduces

Powerful Brokk 500 Demolition Machine

Brokk, the world's leading manufacturer of remote-controlled demolition robots, introduces the new Brokk 500, which features 40 percent more demolition power than the Brokk 400 as well as the Brokk SmartPower™ electrical system, a more powerful breaker, extended reach and industry-leading serviceability. And, it adds a portion of good looks to the worksite as well.

Brokk unveiled the Brokk 500 during CONEXPO-CON/AGG in Las Vegas and at www.brokk.com.

"The Brokk 500 is a remarkable demonstration of how far we have come in getting the most demolition power possible out of a Brokk machine without adding to its size, largely thanks to our new Brokk SmartPower system," said Martin Krupicka, Brokk Group CEO. "It is also yet another proof point of the resources we invest in product development; the Brokk 500 is the fourth new machine we released in just over a year's time."

The new Brokk 500 adds 40 percent more breaking power than its predecessor,

the Brokk 400. The machine delivers 1,086 foot-pounds (1,472 joules) with each blow of the 1,510-pound (685-kilogram) Atlas Copco SB 702 hydraulic breaker. On top of that, it adds more length to Brokk's signature three-part arm system, now reaching 24.3 feet (7.4 meters) vertically and 23 feet (7 meters) horizontally, making it ideal for work where extra reach is important.

Still, the Brokk 500 retains most of the compact proportions of the Brokk 400. Weighing 11,464 pounds (5,200 kilograms), it is only slightly heavier, and the width of the machine is the same. It also is "backward compatible," so all the tools and attachments used for the Brokk 400 can also be used on the new Brokk 500.

The Brokk 500 comes with Brokk's new intelligent electrical system, Brokk SmartPower, which is a key part in creating the machine's performance improvement. It maximizes the power output of the machine at any given time based on both environmental and operating factors.

The Brokk SmartPower system is uniquely designed for the extremely tough operating environments of a demolition robot. Its components are either designed by or modified by Brokk to withstand the demolition forces over time. In addition, it helps the operator start the machine on a poor power supply while at the same time it protects the Brokk machine from any harmful faulty power.

The Brokk 500 incorporates the industry-leading reliability and serviceability that Brokk has become known for over the years. New on this machine is that operators can complete all daily and weekly maintenance without having to lift the covers of the machine. Replacing any damaged hydraulic hoses is now simpler than ever.

Add other items, such as the strengthened new Brokk machine design, the reinforced casted details, and the new headlight protections, and the result is a machine truly hardened for the tough Brokk environment.

In order to achieve ISO 9001:2015 Certification, companies must demonstrate that they have implemented effective quality management systems, including a strong customer focus and a process of continuous improvement across all areas of the business, including facilities, people, training, services, and equipment. Felling Trailers, Inc.’s certification process was carried out in partnership with Transpacific Certification LTD and included a detailed assessment of the company’s facilities. Interviews were carried out with management and employees, and procedures were reviewed across all functional areas, including operations, training, and development, customer complaint handling, finance, and billing.

Mack Trucks Reaches Milestone of 100th Certified Uptime Center

Mack Trucks announced today that it certified its 100th dealer location as a Mack Certified Uptime Center – an accreditation signifying the dealer has met stringent requirements to better improve service and help keep customers' trucks up and running.

Standardized workflows and processes at Mack Certified Uptime Centers, combined with redesigned service bays, enable quicker repairs and more streamlined service for customers. Mack began distinguishing dealerships that achieved the guidelines to be a Mack Certified Uptime Center in January 2016.

“Attaining 100 Mack Certified Uptime Centers in a relatively short amount of time exemplifies how Mack dealerships are committed to going above and beyond to best meet the needs of customers,” said Jonathan Randall, senior vice president of sales for Mack Trucks North America. “We have many more dealerships in the pipeline for this certification, and I’m pleased to see dealers dedicating resources to better manage uptime and obtain this distinction.”

Mack Certified Uptime Centers feature “uptime bays” reserved specifically for trucks with service and repair tasks requiring less than four hours of work. Customers with vehicles needing a quick repair are rapidly diagnosed, serviced and returned to work, increasing efficiency at the dealership and improving a customer’s ROI.

Results show that Mack Certified Uptime Centers helped

increase shop efficiency by 24 percent and reduce check-in time by more than 40 minutes.

Mack’s Uptime Solutions, including Mack® Guard-Dog® Connect telematics and Mack ASIST service management system, are built into the new Mack Certified Uptime Centers’ workflows.

Working with its partner Geotab, a leading global provider of end-to-end telematics technology, Mack now offers connectivity for older Mack vehicles that are not equipped with the GuardDog Connect telematics hardware. After installing a small Geotab telematics device, the Mack Uptime Center will be able to monitor the same critical vehicle codes as Guard-Dog Connect hardware.

If an issue is detected, Mack OneCall™ agents will evaluate and provide the customer’s designated contact with decision-critical information through Mack ASIST, an online communications and service management portal. Repair scheduling, as well as parts and service bay availability, are also confirmed, all while the truck is still on the job.

“Mack consistently seeks opportunities to extend its uptime solutions, and we’re pleased that dealerships share the same business philosophy of maximizing efficiency,” said David Pardue, Mack Trucks vice president of connected vehicles and uptime services.

FELLING The Trailer Experts

Felling Trailers is a family owned and operated Full Line Trailer Manufacturer located in Central Minnesota. Started in 1974 by Merle J. and Kathy Felling, Felling's daughters Brenda Jennissen and Bonnie Radjenovich now own and operate the company with their spouses Patrick Jennissen and Paul Radjenovich. Felling Trailers, Inc. has grown from a small shop to a factory and office complex that today covers over 260,000 square feet. Felling Trailers currently manufactures over 5,000 trailers a year ranging from a 3,000 lb utility trailer to a 120,000 lb hydraulic gooseneck trailer, and its standard trailer line includes over 240 models. Felling's pride and differentiation is its customized trailer division. Its engineers utilize the latest Industry-leading design techniques, and its experienced metal craftsmen use cutting-edge technology to turn its customers' conceptual trailer needs into a tangible product. Felling Trailers continually researches and implements new technologies to reduce lead-time and increase production in the manufacturing plant. Felling has been providing innovative trailer solutions to the transportation industry for over 40 years. With over 100 years combined industry sales experience, we have the answers to your specialized trailer needs. Felling Trailers' current capabilities allow them to provide a high-quality product that is distributed across North America and internationally. Felling Trailers, Inc. is an ISO9001:2015 Certified Company.

For more information, contact 1.800.245.2809, sales@felling.com or visit them on the web at www.felling.com. You can also follow them on Twitter (@FellingTrailers), Facebook (Felling Trailers, Inc.), and Pinterest.

Talbert Manufacturing Releases New 50-Ton Trailer with In-Deck Winch

Talbert Manufacturing, a North American leader in specialized heavy-haul solutions, introduces its 50-Ton Bus Hauler (50CC-BH) trailer that gives customers enhanced versatility. Talbert designed the trailer with an in-deck winch so users can load equipment from either the front or rear of the trailer. The 50CC-BH boasts a 50-ton capacity rating for hauling a wide range of oversized equipment, including buses, excavators and class A trucks. The trailer is also ideal for hauling equipment with low clearance and long wheel bases, such as graders and aircraft refueler trucks.

“This trailer is ideal for our customers that haul a variety of equipment. These customers face a wide range of challenging

requirements, including the need to load pieces with low approach angles, such as buses,” said Troy Geisler, Talbert vice president of marketing and sales. “We designed the 50CC-BH to accommodate that need, giving this customer base a safe and cost-effective way to achieve that.”

Talbert designed the 50CC-BH with extra steel in the main and side beams of the deck as well as the gooseneck and rear axles. This design allows the trailer to achieve its 50-ton capacity rating without significantly increasing its weight. The trailer features rollers and a snatch block that allow users to pull equipment from either end of the trailer using the 20,000-pound planetary in-deck winch. Customers can operate the winch via remote control, which

eliminates the need for additional people when loading inoperable equipment. This also saves customers from the hassle and costs associated with hiring a towing company.

The 50CC-BH is equipped with three close-coupled axles and features a 22-foot 6-inch lower deck length, plus a 20-foot 5-inch rear bridge, creating a 43-foot load base, which provides ample space for hauling large equipment. The trailer has a 21-inch deck height and a 24-inch flip-up gooseneck that increases the unit’s 84-inch swing radius to 108 inches. This allows the unit to be used with both three- and four-axle trucks and keeps the trailer within the 53-foot overall length limit when running empty, saving permit costs.

Talbert offers the 50CC-BH with heavy-duty 10-foot removable aluminum ramps, which can be stored in compartments at the trailer's gooseneck. The 50CC-BH is designed with a low front and rear load angle, making it ideal for loading large, low-profile equipment.

Like all its trailers, Talbert manufactures the 50CC-BH with heavy-duty T-1, 100,000-psi minimum yield steel for extreme durability and longevity. Talbert trailers come standard with Val-spar R-Cure® 800 paint to prevent corrosion for a long-lasting finish and better return on investment.

RegScan Web Services

Your System, Our Content

 **RegScan ONE**

One World, One Platform

www.regscan.com

REGSCAN ONE GLOBAL REGULATORY SOFTWARE

Discover your software solution today!

With a dedicated staff of experts in four U.S. states and Washington D.C., and an ever-growing network of in-country resources, RegScan can always be counted on as a trusted resource for up-to-date regulatory information from every corner of the globe. RegScan has consistently outpaced a growing league of competitors in the industry niche we incepted, by offering unique solutions to our Fortune 1000 customer base. Whatever business you're in, we can assist you with your compliance needs. Our vast product line includes online compliance solutions for a variety of industries:

- Manufacturing
- Transportation
- Energy
- Chemicals and more!

RegScan's unique online tools enable easy access to, and interpretations of, global environmental regulations and operational standards. Do your research and get your alerts through the RegScan One system, or have your content exported via web services to any online environmental management system. Users of the RegScan One system can create custom legal registers and audit protocols for more than 140 jurisdictions. Access the interface in nine languages:

- English
- Chinese
- French
- German
- Italian
- Japanese
- Malay
- Portuguese
- Spanish

Educational Resources

Webinars

RegScan understands that staying in compliance is critical. But it doesn't have to be complicated. That is why we host webinars several times throughout the year that help our clients tackle ever-evolving problems in the EHS industry. Prior topics covered included regulatory overviews, the Changing Role of the EHS Manager, and ISO 14001:2015. Such topics specifically address the newest industry standards while banishing compliance confusion, provide necessary tools to manage today's EHS challenges and reduce time and money spent on compliance activities.

Tutorials

RegScan also produces a number of helpful videos for our users. They answer most commonly asked questions on using the RegScan One interface. You may wish to visit our Informational & Tutorial Videos Page prior to submitting a ticket to see if your question can be answered with the assistance of one of these videos.

Quality Suite

RegScan has introduced audit protocols and checklists geared to quality management in healthcare. They cover the basic ISO 9001 and Quality Systems, Medical Devices (United States and the European Union), and Pharmaceuticals.

I-Comply Checklists have been added to provide Environmental, Health, Safety, Security for Data Centers and Offices. When you still have EH&S issues, but not the intensity of a manufacturing opera-

Tracking Regulatory Change

Strikethrough

Strikethrough allows you to effortlessly see the amendment history of a regulation by comparing the current regulation with an earlier or future version. Changes are easily identified by color-coding. Anything that has been added will appear in green, while anything that has been deleted will appear in red.

My WatchList

My WatchList is a custom regulatory change management tool that allows you to monitor change at various levels of detail. It gives you quick access to only the information you need, while providing a clear record of what you have and haven't reviewed. My WatchList is the easiest way for a Web Services user to build a custom regulatory register, which RegScan will automatically export to your online environmental management system.

LookOut Email Alert

By defining specific keywords or phrases, LookOut allows you receive daily Email alerts on State or Federal regulatory changes.

RegScan Customer Support

As part of our ongoing commitment to improve the RegScan user experience, we use a ticketing system for customer support inquiries. This allows us to streamline requests and better serve you. Available 24/7, the ticketing system

allows you to immediately report an issue and track the support team's response to it. Every support request is assigned a unique ticket number. For your reference, we provide complete archives and history of all your support requests. A valid email address is required to submit a ticket.

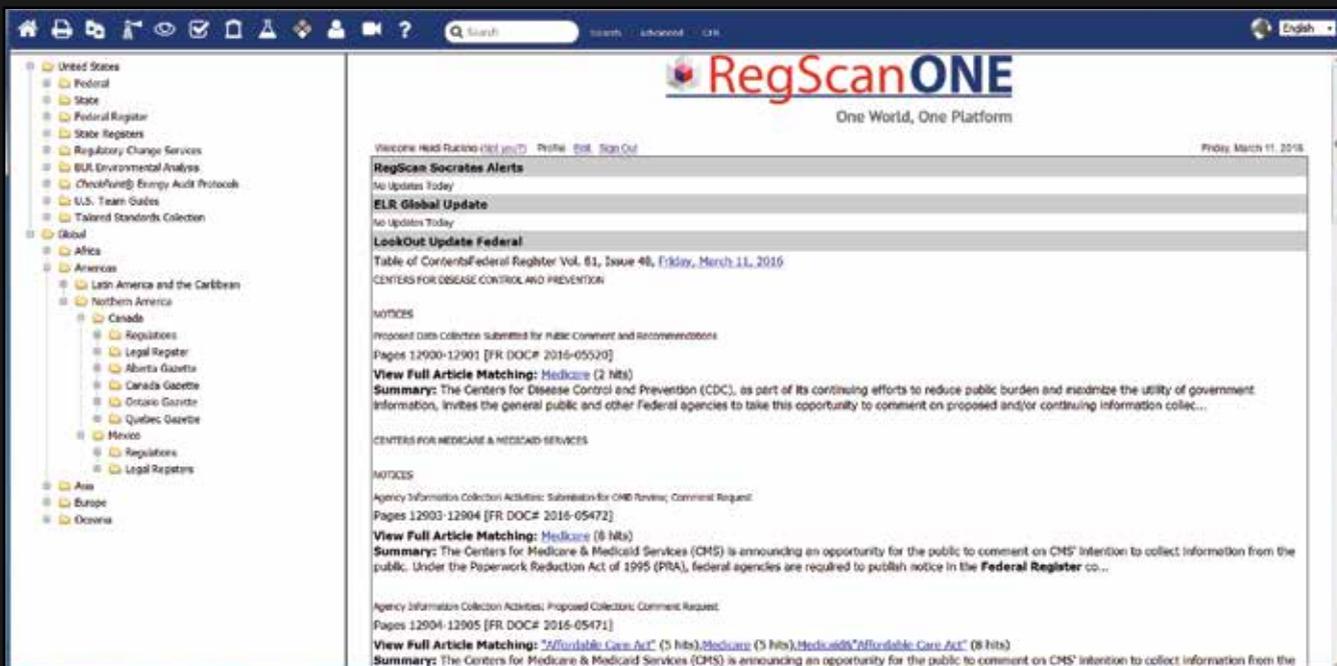

Schedule a Demonstration

The RegScan team will gladly demonstrate any of our products or services for free. Our online demonstration sessions can accommodate up to 25 people, and we will schedule a meeting whenever it's convenient for you. During these interactive demonstrations, our experienced staff will go through whatever products or services interest you. You'll also have the opportunity to ask questions, and discuss licensing options that are tailored to your needs. If you decide to purchase, we can take of your training and support needs too. We frequently update our library of training videos, and we'll be happy to arrange online or in-person training sessions. Furthermore, our in-house technical support team is always available on weekdays (except for holidays) between 8 a.m. and 8 p.m. Eastern time, and online 24/7.

A Woman Owned Small Business

"From the simplest to the complex, Jesco does it best!"

DIAMOND WIRE MESH ENCLOSURES

Time tested diamond mesh partitions have been pre-engineered for easy installation, give an unrestricted view into the cage, total air circulation, low initial cost and maintenance. Send us the footprint of your project and allow our engineers to assist you on your next project!

SELF DUMPING HOPPERS - 50+ Sizes and Specials!

All welded self dumping hoppers are available in more than 50 different sizes that will fit to your application. All units are engineered to return to an upright position and have a positive locking latch. Safety retaining chain and trip rope assembly is standard on all our units. Open-sided, low profile, narrow, extra wide, and 10,000# capacity units are all within our product line. Casters available on standard units up to the 2½ cubic yard size.

WIRE MESH INFILL PANELS

We will custom fabricate these infill panels to meet your specific requirements. Just send us your specs!

Available in diamond, rectangular and square mesh, with or without standoffs. Frames available in 1" x ½" channel or with a hemmed edge. Other size framing materials and mesh are available, specify weld pattern and types of weld finish desired. Division 5,8 and 10.

EEZY STAK® Enclosures

2" x 1" Rectangular Mesh EEZY STAK® Enclosures are designed and engineered to save time and money on your project installation. Woven wire mesh panels welded into an angle frame; frames secured to the posts. No wire ties or unheard of specialty clips. Jjust nuts, bolts, and standard hand tools are required. Dark Gray painted panels allow for full visibility into enclosure.

E-Z Drill Rental Program

E-Z Drill's rental program provides contractors a cost-effective method to complete concrete dowel drilling jobs. The program is offered throughout more than 60 E-Z Drill dealers across North and South America, Europe, Asia and Australia, and it allows customers to rent or re-rent E-Z Drill's most popular units and Dust Collection Systems.

"We understand that contractors might not be ready to buy a new drill," said Rick Walstad, E-Z Drill president and CEO. "This program offers a solution to those who do infrequent concrete drilling and doweling or who are just getting started in the business. They have a less expensive way to achieve the production, efficiency, and ease of use that comes with E-Z Drill."

The rental program allows contractors to take on jobs they may typically avoid such as full-depth repairs or patchwork. This added flexibility increases profits and helps them to better service their customers. Contractors also have the opportunity to try the units before they purchase so they are familiar with the drills and can determine which model will best suit their applications.

Shoo-pin™

Flex-Cable Adapters

PT-FX Series adapters are designed to terminate high-strand flex-cable (locomotive, mining, welding) to machinery, panels, and transformers. The pins fit mechanical set-screw type connectors and are sized for the current carrying capacity of the cable. These adapters feature the Greaves flared Shoo-in™ barrel-opening design for easy cable insertion. Insulating covers are provided.

Wherever flex-cable terminates in a set-screw lug:

- Telecommunications
- Construction Sites
- Drilling Platforms
- Theme Parks
- Locomotive
- Welding
- Marine
- Mining
