CLYDESDALE

SKID BASE SELF-ERECTING PORTABLE CONCRETE BATCH PLANT

Improve the quality and efficiency of your mobile batch plant operations with the new Stephens Clydesdale skid base system. Specially designed features reduce the typical installation and operating costs and help increase your margins. You can count on Stephens for the highest quality equipment, service & support.

- Highly Portable 14' Travel Height
- Concrete Foundation May Not be Required, Consult Local Engineer
- No Crane
- Up to 200 cy/hr
- Hydraulic Self-Erect

Stephens CONCRETE EQUIPMENT

Why buy a Stephens?

- Owned by the Stephens Family since 1957
- Honest, reliable, second-to-none sales & service
- In-house CNC Machine Shop
- Simple and easy to service & maintain
- Standard, off the shelf parts

Felling's Triple Reel Trailer is Cooperative's Cable Deployment Solution

In 2003 an Electric Cooperative company, based out of southern Minnesota was looking for an alternative trailer supplier that was locally based. Having heard of Felling Trailers, the Co-op made the call and was put in touch with Laurie Engle, one of Felling's Trailer Sales Consultants. At that time Felling had been building cable reel trailers for about ten years and was considered relatively new to the utility industry. Laurie worked with the Cooperative to configure a triple reel trailer to meet their company's needs, which was the start of a 15-year partnership. "Laurie treated me well and has been nothing short of fabulous since the day we first talked," said the Operations Manager for the Coop.

The cable reel trailer that started the partnership was retired from service, the Cooperative placed the new unit, an FT-30-3 Triple Reel, in service in early 2018. The cooperative currently has five Felling cable reel trailers in service, with varying features and capacities.

A few of the features that were incorporated into the build of the FT-30-3 Triple Reel were selected to increase time efficiency and worker safety.

ROME

Manufacturing Heavy Duty Construction and Agricultural Implements Since 1932

ROME PLOW COMPANY IMPLEMENTS

The ROME brand name has always been tied to heavy duty Construction and Agricultural disc plows.

ROME continues to manufacture the same style of implements that has made the ROME PLOW brand name famous for over 80 years.

ROME also manufactures pivot dump and ejector scrapers for the AG and Construction Industries.

This includes a full line of Earth Moving Scrapers and precision land levelers, such as land planes and float planes.

For more information on our products or for the closest authorized ROME dealer please contact us.

770-748-4450
www.romeplow.com

- A-frame reel stands: the trailer is equipped with three bolt-on reel stands. The design of the reel stands provides accessibility for the operators to load cable reels by use of a forklift vs. loading with a boom truck. The versatility to

load reels this way saves the operator time and reduces safety risks. A bonus with the reel stands being bolt on; they can be moved when there is a need to adjust the tongue load, ensuring proper weight distribution when towing.

- Custom air tank: the large air tank is located in the hitch with a pressure gauge, shut off valve, and airline for the operation of the air brake system. "It is common for the Cooperative to deliver the reel trailer to job sites loaded with cable so that the contractors can start boring the cable underground before the Cooperative's Crew is needed on site. However, where the trailer is left on the job site isn't always where the contractor needs it to be for the boring and without an air brake equipped truck moving the trailer would be more like dragging the trailer," said the Operations Manager. The air tank feature provides the necessary air pressure for operation of the air brake system allowing the trailer to be moved to the needed location on the job site.

- Catwalk: As with the majority of electric cooperatives, the spring and fall of the year are the coop's busiest times. With these times of year comes a variance of weather extremes, especially in Minnesota. It is not out of the ordinary to have ice and snow in late May or in early October. The varying weather and working conditions played a strong

factor in the construction of the FT-30-3 Triple Reel's catwalk feature. The catwalk runs the length of the trailer from headboard to fender and then from fender to tailboard. Constructed with grip strut with an approximate width

of 10", bracing then runs underneath with a rear lip to prevent fall through.

- Safety & Stability: additional features that were selected for this trailer were (2) rear pull pin stabilizer legs and rubber wheel chocks. When

deployed these two features work together to maintain the stability of the trailer and the integrity of the load.

The FT-30-3 Triple Reel trailers are used to haul large underground cable from job to job, but these units only represent a few of the Felling trailers that the coop has in its fleet. "Our fleet consists of 35 trailers, 20 of these are Felling trailers. The capacity and function of the trailers range from dump boxes (hydraulic dump trailers), to cable trailers and flatbeds (both drop deck and deck over). The dump boxes are used to haul dirt and sand to and from job sites. We also use them to haul logs and tree debris when we are trimming trees. The newest update to our drop deck trailers is to galvanize them. They are out quite a bit in the winter hauling our mini excavators to and from job sites, the galvanizing will help them last longer in dealing with the winter elements," said the Operations Manager. "These trailers help the work run smoothly. They are good, well-built trailers, they work great for us."

John Deere Upgrades Compact Wheel Loader Line with New 244L and 324L Models

Offering operators increased productivity and significantly faster travel speeds, John Deere redesigned its K-Series compact wheel loader models with the introduction of the 244L and 324L compact wheel loaders. Ideal for landscape/snow removal, ag material handling and construction tasks, the new models round out the full line of L-Series compact wheel loaders available from John Deere.

“Our next generation of compact wheel loaders was designed to meet the needs of industry professionals who are demanding higher performance from their machines,” said Drew Miller, product marketing manager, compact wheel loaders, John Deere Construction & Forestry. “Tailor-made for tight spaces, the 244L and 324L use our

proprietary Articulation Plus™ system to provide greater stability and yield more lifting power while turning tighter.”

The industry-exclusive Articulation Plus™ steering system on the 244L and 324L provides operators an unparalleled combination of lift capacity and maneuverability. This feature includes an articulated frame plus rear-wheel steer, providing excellent full-turn tip load and stability with a tight turning radius.

Newly optimized linkage provides improved parallel lifting, with only 6 degrees of rollback. The 244L achieves an 8-foot, 3-inch (2,520 mm) full-lift dump height and a full-turn tip load of 8,157 lbs. (3,700 kg), while the 324L

You'll never see it coming.

One second can change everything - especially where arc flash is concerned. That's why it's critical to understand the proper selection and use of PPE tested to withstand an arc flash event. To learn more about arc-rated PPE solutions from MSA or request a FREE, no obligation safety evaluation, visit MSAsafety.com/safetyevaluation.

WE KNOW WHAT'S AT STAKE.

MSA
The Safety Company

WE HAVE THE ROPE TO GET THE JOB DONE.

with high lift reaches a 10 foot, 3-inch (3,130 mm) height; and standard lift is capable of a full-turn top load of 9,766 lbs. (4,430 mm).

To increase productivity, the new models allow operators to move faster without having to manually shift the machine. A smooth auto shift hydrostatic transmission is coupled with an automatic two-speed gearbox, which provides a faster travel speed of up to 23 mph — a 21 percent increase in speed over the K-Series models. Both models are equipped with 73-horsepower (54 kW) Final Tier 4 engines.

Knowing a comfortable operator is a productive operator, the 244L and 324L models offer a redesigned cab. An optional air ride, high-back operator seat ensures a smooth ride. Better visibility to the loader arm and bucket, and interior layout of the switches and gauges improves overall efficiency.

For greater uptime, a rear enclosure provides better debris management, while a revamped cooling package improves air flow. This is ideal for tasks that require longer run times in high air-borne debris applications, like agriculture and light material handling.

To keep operating costs at a minimum, rim pull control extends tire life by allowing customers to adjust the torque of the machine to the conditions of their job sites, saving tire and drive line life. Additionally, optional JDLink™ telematics provides real-time data and health prognostics to suggest maintenance solutions that decrease costly downtime. Remote diagnostics enable a dealer to read codes, record performance data and even update software without a trip to the job site.

Contractors looking to get the most versatility out of their machine can leverage over 100 John Deere Worksite Pro™ attachments. These new models are also backed by the John Deere full machine standard warranty, which promises to fix any defects in materials or workmanship for two years after delivery or 2,000 hours — whichever comes first.

THE CRUSHING EVOLUTION

Mobile Dust Suppression Design Features Tier IV Final Gen Set

A global innovator in dust and odor control technology has updated its family of self-powered dust suppression equipment with Tier IV Final-compliant generators, ensuring compliance in all 50 states. BossTek made the announcement with the debut of the new DustBoss® DB-60 Fusion™, a field-proven suppression system driven by a high-reliability 25 HP electric motor and paired with a gen set powered by a heavy-duty 4-cycle indirect injection diesel engine. Designed, engineered and assembled in the USA, the generator features a dual-containment fuel cell, heavy gauge lockable enclosure and oversized brushless alternator for easy starting.

Permanently mounted on a rugged road-worthy trailer, the company's Fusion lineup is proving to be a popular and effective means of delivering versatile, mobile dust suppression technology to sites that lack a readily available power source. The company expects to unveil two other Fusion models in early 2019, giving customers the ability to select the size and coverage range needed to best suit their operations.

The new generator series is designed with sound attenuation for excellent noise reduction and a multi-voltage switch with utility power outlet in all voltage modes. The digital engine / generator controller is equipped with single button stop / start and an 80-gallon fuel capacity, giving the units a run time of more than 24 hours at a prime rating of 45 kVa. Like its previous Fusion systems, BossTek warrants the DB-60 Fusion for three years / 3,000 hours, with 5-year / 5,000 coverage on the electric motor and a 2-year / 2,000 hour warranty on the generator.

What Tier IV Means

Tier 4 refers to the latest emission milestone established by the U.S. Environmental Protection Agency (EPA) and the California Air Resources Board (CARB). The regulations apply to new engines found in off-road equipment, including construction, mining and agricultural equipment, as well as marine vessels, locomotives and stationary engines used in industrial and power generation applications.

Tier IV-compliant engines are designed to significantly reduce emissions of particulate matter (PM) and oxides of nitrogen (NOx) to near zero levels. Relative to previous emissions standards, Tier IV-compliant engines reduce emissions by over 95 percent for most agricultural and construction equipment and just over 86 percent for much larger applications such as locomotives and marine vessels. The Tier 4 emission standards are roughly similar to emission reduction requirements for engines that power heavy-duty trucks.

How It Works

The DB-60 Fusion drives pressurized water through a circu-

lar stainless steel manifold with 30 atomizing spray nozzles, then launches millions of tiny droplets with a powerful fan that produces 30,000 CFM (849.50 CMM) of air flow. Atomized mist droplets of 50 to 200 microns in size are thrown out in a 200 foot (60 meter) cone at an adjustable 0 to 50° elevation angle, capturing airborne dust particles and dragging them to the ground. Unlike industrial sprinklers used for the same purpose, which can require hundreds of gallons of water per minute, the DB-60 only uses about 23 GPM (87 LPM) to help avoid pooling or runoff.

A touch screen panel for controlling the dust suppression unit is encased in a NEMA 3R cabinet, allowing operators to control oscillation, booster pump, fan and water. The cabinet is constructed for outdoor use, designed to provide protection against solid foreign objects (such as dirt), air (dust, emissions), water (rain, sleet, snow) and ice formation. The system provides valuable mobility and versatility in one of the most popular and effective dust suppression designs on the market, able to deliver up to 62,800 square feet (5,834 square meters) of coverage.

“Maintaining air quality is essential for communities near a

demolition project, mining operation or other bulk material handling activities, but even in places with little infrastructure, dust can choke worksites and foul equipment,” said Project Engineer Jason Lesch. “We engineered the Fusion to be highly mobile, with its own power source, so it can be easily towed anywhere on a job site.”

Equipped with an in-line 75 mesh, 200 micron filter, the unit can be specified with special filtration to accommodate non-potable water sources. In addition, the new design can be optimized with a Variable Frequency Drive (VFD) to precisely adjust fan speed. An optional dosing pump is available for precise metering of additives to enhance particle control even further.

5 Steps to Winterize Your Home for Comfort & Energy Savings

Keeping the warmth in and the cold out is quick, easy, and requires no construction

When the temperature drops, snow falls, and there is an icy chill in the air, homeowners know it is time to winterize their homes for comfort and energy savings.

If you simply cannot stand another frigid winter with cold drafts blowing through your home, just follow five quick, easy steps to keep your home feeling toasty without hurting the family budget.

While the first few tips may be familiar, the last one will surprise you. It tackles perhaps the greatest heat drain on your home in an innovative way that could leave your family feeling warm and comfy for many winters to come.

In the battle against winter chills and rising heating bills, the key strategy is to keep the precious heat inside and the cold drafts outside. Here is how you do it:

1. Water heater and pipes

To keep hot water for baths, showers, and handwashing without constantly firing up the water heater, wrap an insulated blanket around it, which will conserve the heat. To keep any exposed household pipes out of the cold and from potentially freezing, it is a good idea to wrap them with insulation too.

2. Attic, walls, and basement

In order to further limit heat loss, add insulation to the attic, walls, and basement as well, if this is insufficient. If you can see exposed ceiling joists in the attic, you probably do not have enough. So, it is a good idea to roll an additional blanket of insulation over the top of any already in place.

It is particularly important to insulate the attic to prevent heat transferring from your home's living areas to the roof. There the heat can melt snow and ice on the roof, which then refreezes, along with additional snow and ice, causing ice dams on the roof. These ice dams can block roof drainage, leading to water damage and potentially a collapsed roof under the weight of accumulated water, snow, and ice.

3. Fireplace and Furnace

When you are not using the fireplace, close the flue to prevent heat from going up the chimney. While you are at it, replace your furnace filter to ensure good furnace airflow and heat distribution throughout

your home. Move any furniture that may be blocking the heating vents.

4. Doors

Any gap around doors will allow warm air to escape and cold air to enter. Adding weather stripping around the door, including the door sill, will help to plug these gaps. But weather stripping tends to crack and shrink, particularly in harsh climates. So, check it annually and replace it as necessary.

5. Windows and Patio Doors

Windows and glass patio doors are arguably the greatest culprit of home heat loss. They transfer heat by thermal conduction through the panes and glass surface, so additional heating is required to keep everyone comfortable.

Air leakage through window and patio door seals that crack over time also worsens the problem. While single pane windows transfer the most heating (and cooling), even dual pane windows may be insufficient to keep homes sufficiently warm and tame high utility costs.

However, homeowners are finding relief with an innovative approach that adds an inner insulating window to existing windows, and a "second sliding patio door" that can be installed inside or outside of the existing door. This can reduce heat loss by 77% or more for single paned windows, and heating/cooling bills by up to 30%, while stopping air infiltration for further energy savings and greater comfort.

Adding the inner window, in fact, provides an additional layer of insulation with better insulation values than the best double pane windows, and substantially improves insulation values for dual pane windows as well. The second sliding patio door has even greater insulation value due to its greater surface area.

The same practice has an added benefit. It also serves as an effective sound barrier to dramatically reduce unwanted external street noise. This provides homeowners with a better night's sleep and a more peaceful environment.

As an example, Soundproof Windows, a national manufacturer of window energy efficiency and soundproofing products, specializes in adding a "second insulative window" that can be installed easily in front of the existing window. The product is designed specifically to match and function like the original window, no matter its design or whether it opens or closes, and can be installed in hours without

construction. The company also offers a "second sliding patio door" that follows the same principle.

To prevent air infiltration, the company's window frame and patio door seals are held under constant tension, using custom made tempered stainless-steel springs that actively squeeze down on the window and sliding door. This means the window and patio door seals are flexible, constant and always working.

When used in combination with existing windows, in fact, the second window and patio door seals effectively eliminate any cold outside air from leaking into the home from this source. This considerably reduces the need to crank up the heat to maintain comfort, which further increases home energy savings. In terms of reliability, such seals are guaranteed for a 50-year lifespan.

Homeowners understandably do not want to "see their breath" indoors due to the cold or pay heating bills topping 4 figures this winter.

Fortunately, they won't have to if they follow a few steps to keep the heat in and the cold out this season. By doing so, they will not only increase their family's comfort, but also significantly save on heating (and cooling) costs for years to come.

For more information, contact Soundproof Windows, Inc. at 4673 Aircenter Circle, Reno, NV 89502; call 1-877-438-7843; email sales@soundproofwindows.com; or visit <http://www.soundproofwindows.com>
